

*It wasn't my time to go.*  
NANCY SEAGRAVES

*N*ancy Seagraves's chest felt tight, but she didn't think she was very sick. She was wrong. "Now I know why heart disease is called the Silent Killer," she says. "And two other words now mean more to me than ever—I'm alive." By the time Nancy got to the hospital, her heart attack became dire. "The Heart Center saved my life. Whatever it is I'm supposed to do with this time, I hope I can. I cannot thank this hospital enough."

That courage is our thanks.

The Heart Center at Hilton Head Regional Medical Center offers comprehensive cardiac care from diagnostics to rehabilitation, including advanced procedures like open-heart surgery and angioplasty.
